

Specimen: US-guided core biopsy, segment VIII

Findings:

- Well to moderately differentiated HCC
- Eosinophilic cytoplasm, mild nuclear atypia
- Loss of reticulin framework
- Background fibrosis (F2–F3, Ishak)

Immunohistochemistry:

Glypican-3 (+), HepPar-1 (+), CK7 (–)

Diagnosis:

Hepatocellular carcinoma, moderately differentiated.

Stage: T2N0M0 (AJCC 8th ed., Stage II)
