

Patient Name: Mr. Daniel R. Huang

Age/Sex: 63-year-old male

Date of First Presentation: March 3, 2025

Referring Physician: Dr. L. Tan

Consulting Oncologist: Dr. M. Al-Khalid

Presenting Complaint:

Gradual onset of right upper quadrant discomfort and fatigue over 2 months. Unintentional weight loss of 6 kg.

History of Illness:

Chronic hepatitis B infection (15 years), on tenofovir. No alcohol intake for 10 years. No prior hepatic decompensation.

Physical Exam:

Mild hepatomegaly (3 cm below costal margin), no ascites. ECOG 1.

Oncologist Impression:

Compensated chronic liver disease with suspected primary hepatic malignancy. Plan for staging with triphasic CT, AFP, and biopsy confirmation.
